MXT 14 is designed to support, charge and maintain batteries that are put under a lot of strain, like the ones used in commercial vehicles, buses and trucks.

Its 24V power supply supports the vehicle battery during diagnostic and servicing work. It also delivers fully automatic 8-step charging with temperature compensation for use in all weather conditions between -20°C and +50°C (-4°F to +122°F).

And, like all CTEK PRO Series products, MXT 14 has automatic parallel load compensation which makes sure that power supply voltage and amperage are always constant and correct, even if the battery has an additional load placed on it during diagnostic work.
